

Lab 1:

Installed Node.js from the internet and installed Next.js

Lab2:

Installing docker and mongoDB alongside it

Lab3:

Started on with the main assignment with task 1 creating a register page and api page and see it on the website with localhost:3000

Lab4:

Connecting to the database using docker and making calls from the application

Lab5:

Started making the dashboard so customers can see the products listed, that is being read from the database

Lab6:

Skipped lab6 due to kyle having a meeting

Lab7:

Started working on the register page, and registering to get an api key, also made an account in atlas mongoDB so that the database is in the web and can be accessed from any computer. In addition, made an account in vercel that reads github repositories and makes a domain so that it can be accessed in the internet instead of the webpages being local to the machine.
